Problem Statement:

A store or a market can be located anywhere from any place using google maps, but how will I know whether a specific product is available or not in that store?

Boy: ½ litre milk uncle
Shopkeeper: no milk
beta

Boy: ½ litre milk aunty
Shopkeeper: nahi
beta abhi katham
hogaya

Milk is available but the boy didn't visit

In super market:

Store-A

→ 10

Lay's

→ 5

Kurkure

Store-B

→ 15

Mountain Dew

→ 12

Ocean Spark

Store-C

→ 0

Lay's

→ 7

Kurkure

Store-D

→ 0

Mountain Dew

→ 5

Lay's

Local stores with no database system:

Now the buyers know where exactly to look for the product instead of scurrying around from store to store.

Thank You

Thank you to team Hackverse 4.0 for giving us the opportunity to work on this Tracks, we learnt many thing while working on this project, finding different ways and different methods, which led us to innovate thinking and looking for more hackathon like this as we thoroughly enjoyed.
